

Birmingham: Hunters Moor

Neurological Rehabilitation Centre

Hunters Moor provides neurorehabilitation, specialist neurobehavioural rehabilitation and spinal injury rehabilitation in Birmingham.

Hunters Moor, a post-acute specialist neurorehabilitation service, provides neurorehabilitation for up to 37 patients in three units. A spinal unit also provides specialist spinal rehabilitation.

An interdisciplinary team of physiotherapists, speech and language therapists, occupational therapists, a neuropsychologist, nurses and rehabilitation assistants provide therapy.

The Janet Barnes unit accommodates those needing neurorehabilitation with complex physical rehabilitation needs. There are 12 en-suite bedrooms.

The Olive Carter unit specialises in neurobehavioural rehabilitation for those with challenging behaviours, including those requiring sectioning under the Mental Health Act. There are 10 en-suite bedrooms.

The Community Reintegration Unit (CRU) provides 15 en-suite bedrooms. The CRU also has the flexibility to create independent living flats or bedsits, depending on the needs of the residents.

Professor Wagih El Masri manages the spinal unit, providing expert rehabilitation for those with spinal injuries. Specialist nurses give care to those who are minimally conscious or in a state of low arousal. Residents with ongoing nursing needs resulting from diabetes, epilepsy, open wounds and those with stoma, tracheotomy or feeding tubes can also be supported.

Longer-term support can be provided for those individuals with progressive neurological conditions such as Huntington's disease, multiple sclerosis, motor neurone disease and Parkinson's disease.

Hunters Moor is a purpose built facility with large gardens on the southern side of Birmingham.

Dr Kanu Achinivu

**MBBS, MRCPsych,
MSc (Clinical Neuropsychiatry)**

Consultant Neuropsychiatrist
and Lead Neuropsychiatrist,
Hunters Moor.

Dr Elie Okirie
